

**WHAT IS CLAIMED IS:**

1. A cosmetic makeup product comprising at least two compositions wherein,  
- a first composition comprises a physiologically acceptable medium and  
- a second composition comprises a mixture of at least one high molecular weight  
polymer having a weight-average molecular mass of greater than or equal to 200,000 g/mol  
and at least one low molecular weight non-volatile liquid silicone compound having a  
weight-average molecular mass of less than 200,000 g/mol, wherein the at least one high  
molecular weight polymer and the at least one low molecular weight non-volatile liquid  
silicone are present in a proportion such that the dynamic viscosity of the mixture at 25°C,  
measured with a Mettler RM 180 rotational viscometer, ranges from 0.1 Pa.s to 120 Pa.s.

2. A cosmetic makeup product comprising at least two compositions wherein,  
- a first composition comprises a physiologically acceptable medium and  
- a second composition comprises a mixture of at least one high molecular weight  
polymer having a weight-average molecular mass of greater than or equal to 200,000 g/mol  
and at least one low molecular weight non-volatile liquid silicone compound having a  
weight-average molecular mass of less than 200,000 g/mol, wherein the at least one high  
molecular weight polymer and the at least one low molecular weight non-volatile liquid  
silicone are present in a proportion such that the dynamic viscosity of the mixture at 25°C,  
measured with a Mettler RM 180 rotational viscometer, ranges from 0.1 Pa.s to 120 Pa.s,  
and

wherein the second composition is applied on top of the first composition.

3. The cosmetic makeup product according to Claim 1, wherein the at least one  
high molecular weight polymer is chosen from silicone polymers.

4. The cosmetic makeup product according to Claim 1, wherein the dynamic

viscosity of the mixture ranges from 0.5 Pa.s to 50 Pa.s.

5. The cosmetic makeup product according to Claim 4, wherein the dynamic viscosity of the mixture ranges from 3.5 Pa.s to 25 Pa.s.

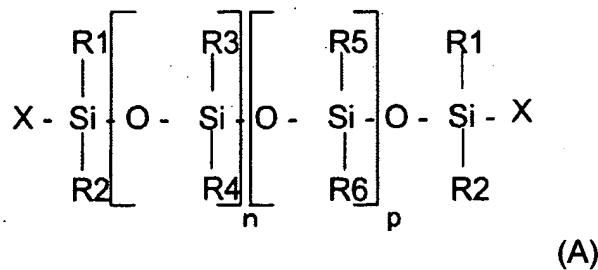

6. The cosmetic makeup product according to Claim 5, wherein the dynamic viscosity of the mixture ranges from 5 Pa.s to 10 Pa.s.

7. The cosmetic makeup product according to Claim 1, wherein the at least one high molecular weight polymer has a weight-average molecular mass ranging from 200,000 g/mol to 4,000,000 g/mol.

8. The cosmetic makeup product according to Claim 7, wherein the at least one high molecular weight polymer has a weight-average molecular mass ranging from 200,000 g/mol to 2,500,000 g/mol.

9. The cosmetic makeup product according to Claim 8, wherein the at least one high molecular weight polymer has a weight-average molecular mass ranging from 200,000 g/mol to 2,000,000 g/mol.

10. The cosmetic makeup product according to Claim 1, wherein the at least one high molecular weight polymer is chosen from silicone polymers of formula (A):

wherein:

- $R_1$ ,  $R_2$ ,  $R_5$  and  $R_6$ , which may be identical or different, are each chosen from alkyl radicals comprising from 1 to 6 carbon atoms, wherein the carbon atoms are optionally substituted by at least one fluorine atom;
- $R_3$  and  $R_4$ , which may be identical or different, are each chosen from alkyl radicals comprising from 1 to 6 carbon atoms and an aryl radical;
- $X$ , which may be identical or different, is chosen from alkyl radicals comprising from 1 to 6 carbon atoms, a hydroxyl radical, a vinyl radical, an allyl radical and alkoxy radicals comprising from 1 to 6 carbon atoms; and
- $n$  and  $p$ , which may be identical or different, are chosen such that the at least one high molecular weight polymer has a weight-average molecular mass of greater than or equal to 200,000 g/mol.

11. The cosmetic makeup product according to Claim 10, wherein the at least one high molecular weight silicone polymer is a dimethicone of formula (A) wherein  $R_1$  to  $R_6$  and  $X$  are methyls.

12. The cosmetic makeup product according to Claim 11, wherein the at least one high molecular weight silicone polymer is a dimethicone of formula (A) wherein the value of  $n$  is chosen such that the weight-average molecular mass of the at least one high molecular weight compound ranges from 200,000 g/mol to 600,000 g/mol.

13. The cosmetic makeup product according to Claim 12, wherein the value of  $n$  is chosen such that the weight-average molecular mass of the at least one high molecular weight silicone polymer ranges from 200,000 g/mol to 300,000 g/mol.

14. The cosmetic makeup product according to Claim 13, wherein the value of  $n$  is chosen such that the weight-average molecular mass of the at least one high molecular weight silicone polymer ranges from 240,000 g/mol to 260,000 g/mol.

15. The cosmetic makeup product according to Claim 10, wherein the at least one high molecular weight silicone polymer is a dimethiconol of formula (A), wherein R<sub>1</sub> to R<sub>6</sub> are each a methyl group, X is a hydroxyl group, p = 0, and n is a number ranging from 2,000 to 40,000.

16. The cosmetic makeup product according to Claim 15, wherein n is a number ranging from 3,000 to 30,000.

17. The cosmetic makeup product according to Claim 1, wherein the at least one high molecular weight polymer has a viscosity at 25°C ranging from 1,000 cSt to 10,000,000 cSt, measured in accordance with standard ASTM D-445.

18. The cosmetic makeup product according to Claim 17, wherein the at least one high molecular weight polymer has a viscosity at 25°C ranging from 10,000 cSt to 5,000,000 cSt, measured in accordance with standard ASTM D-445.

19. The cosmetic makeup product according to Claim 18, wherein the at least one high molecular weight polymer has a viscosity at 25°C ranging from 10,000 cSt to 1,000,000 cSt, measured in accordance with standard ASTM D-445.

20. The cosmetic makeup product according to Claim 19, wherein the at least one high molecular weight polymer has a viscosity at 25°C ranging from 100,000 cSt to 1,000,000 cSt, measured in accordance with standard ASTM D-445.

21. The cosmetic makeup product according to Claim 20, wherein the at least one high molecular weight polymer has a viscosity at 25°C ranging from 300,000 cSt to 700,000 cSt, measured in accordance with standard ASTM D-445.

22. The cosmetic makeup product according to Claim 1, wherein the second composition is transparent.

23. The cosmetic makeup product according to Claim 1, wherein the viscosity of

the at least one low molecular weight non-volatile liquid silicone compound ranges from 0.5 cSt to 10,000 cSt, measured in accordance with standard ASTM D-445.

24. The cosmetic makeup product according to Claim 23, wherein the viscosity of the at least one low molecular weight non-volatile liquid silicone compound ranges from 0.5 cSt to 500 cSt, measured in accordance with standard ASTM D-445.

25. The cosmetic makeup product according to Claim 24, wherein the viscosity of the at least one low molecular weight non-volatile liquid silicone compound ranges from 1 cSt to 10 cSt, measured in accordance with standard ASTM D-445.

26. The cosmetic makeup product according to Claim 1, wherein the weight-average molecular mass of the at least one low molecular weight non-volatile liquid silicone compound ranges from 400 g/mol to 200,000 g/mol.

27. The cosmetic makeup product according to Claim 26, wherein the weight-average molecular mass of the at least one low molecular weight non-volatile liquid silicone compound ranges from 4,000 g/mol to 20,000 g/mol.

28. The cosmetic makeup product according to Claim 27, wherein the weight-average molecular mass of the at least one low molecular weight non-volatile liquid silicone compound ranges from 400 g/mol to 2,000 g/mol.

29. The cosmetic makeup product according to Claim 28, wherein the weight-average molecular mass of the at least one low molecular weight non-volatile liquid silicone compound ranges from 400 g/mol to 1,000 g/mol.

30. The cosmetic makeup product according to Claim 1, wherein the at least one low molecular weight non-volatile liquid silicone compound is chosen from polyalkylsiloxanes, polyarylsiloxanes, and polyalkylarylsiloxanes.

31. The cosmetic makeup product according to Claim 1, wherein the at least one

low molecular weight non-volatile liquid silicone compound is chosen from:

- non-volatile linear and branched polydimethylsiloxanes (PDMS);
- polydimethylsiloxanes comprising at least one group chosen from alkyl, alkoxy and phenyl groups, pendants or at the silicone chain end, wherein the at least one group comprises from 2 to 24 carbon atoms; and
- phenylsilicones.

32. The cosmetic makeup product according to Claim 31, wherein the phenylsilicones are chosen from phenyltrimethicones, phenyldimethicones, phenyltrimethylsiloxydiphenylsiloxanes, diphenyldimethicones, diphenylmethyl-diphenyltrisiloxanes and 2-phenylethyl trimethylsiloxysilicates.

33. The cosmetic makeup product according to Claim 1, wherein the at least one low molecular weight non-volatile liquid silicone compound is a polydimethylsiloxane with a viscosity at 25°C, measured in accordance with standard ASTM D-445, ranging from 1 cSt to 10 cSt and/or with a molecular weight ranging from 400 g/mol to 1,000 g/mol.

34. The cosmetic makeup product according to Claim 1, wherein the second composition comprises a mixture of a polydimethylsiloxane having a weight-average molecular mass of greater than or equal to 200,000 g/mol and a polydimethylsiloxane having a weight-average molecular mass of less than 200,000 g/mol.

35. The cosmetic makeup product according to Claim 1, wherein the second composition comprises a mixture of a polydimethylsiloxane having a molecular mass ranging from 200,000 g/mol to 300,000 g/mol and a polydimethylsiloxane having a molecular mass ranging from 400 g/mol to 1,000 g/mol.

36. The cosmetic makeup product according to Claim 1, wherein the proportion by mass of the at least one high molecular weight polymer/at least one low molecular

weight non-volatile liquid silicone compound ranges from 20/80 to 60/40.

37. The cosmetic makeup product according to Claim 36, wherein the proportion by mass of the at least one high molecular weight polymer/at least one low molecular weight non-volatile liquid silicone compound ranges from 35/65 to 45/55.

38. The cosmetic makeup product according to Claim 1, wherein the at least one high molecular weight polymer and the at least one low molecular weight non-volatile liquid silicone compound are both present in an amount equal to more than 70% by weight, relative to the total weight of the second composition.

39. The cosmetic makeup product according to Claim 38, wherein the at least one high molecular weight polymer and the at least one low molecular weight non-volatile liquid silicone compound are both present in an amount equal to more than 80% by weight, relative to the total weight of the second composition.

40. The cosmetic makeup product according to Claim 39, wherein the at least one high molecular weight polymer and the at least one low molecular weight non-volatile liquid silicone compound are both present in amount equal to more than 90% by weight, relative to the total weight of the second composition.

41. The cosmetic makeup product according to Claim 40, wherein the at least one high molecular weight polymer and the at least one low molecular weight non-volatile liquid silicone compound are both present in an amount equal to more than more than 95% by weight, relative to the total weight of the second composition.

42. The cosmetic makeup product according to Claim 1, wherein the second composition further comprises at least one colorant chosen from nacres, interference pigments and metallic effect pigments.

43. The cosmetic makeup product according to Claim 42, wherein the second

composition does not comprise wax.

44. The cosmetic makeup product according to Claim 43, wherein the first composition comprises polymer particles dispersed in a liquid fatty phase.

45. The cosmetic makeup product according to Claim 44, wherein the polymer particles are filmable.

46. The cosmetic makeup product according to Claim 45, wherein the polymer particles are chosen from at least one of polyurethanes, polyurethane-acrylics, polyureas, polyurea-polyurethanes, polyester-polyurethanes, polyether-polyurethanes, polyesters, polyester amides, fatty-chain polyesters, alkyds; acrylic polymers and copolymers, vinyl polymers and copolymers; acrylic-silicone copolymers; polyacrylamides; silicone polymers, and fluoro polymers.

47. The cosmetic makeup product according to Claim 44, wherein the polymer particles are present, in terms of dry matter, in an amount ranging from 2% to 40% by weight, relative to the total weight of the first composition.

48. The cosmetic makeup product according to Claim 47, wherein the polymer particles are present, in terms of dry matter, in an amount ranging from 5% to 40% by weight, relative to the total weight of the first composition.

49. The cosmetic makeup product according to Claim 48, wherein the polymer particles are present, in terms of dry matter, in an amount ranging from 5% to 35% by weight, relative to the total weight of the first composition.

50. The cosmetic makeup product according to Claim 49, wherein the polymer particles are present, in terms of dry matter, in an amount ranging from 8% to 30% by weight, relative to the total weight of the first composition.

51. The cosmetic makeup product according to Claim 44, wherein the polymer

particles of the first composition are surface-stabilized by at least one stabilizer.

52. The cosmetic makeup product according to Claim 51, wherein the at least one stabilizer is chosen from block polymers and graft block polymers, wherein the block polymers and/or graft block polymers comprise at least one block resulting from the polymerization of a diene and at least one block of a vinyl polymer.

53. The cosmetic makeup product according to Claim 52, wherein the at least one stabilizer is chosen from diblock polymers.

54. The cosmetic makeup product according to Claim 1, wherein the first composition is in anhydrous form.

55. The cosmetic makeup product according to Claim 1, wherein the cosmetic makeup product is provided in a form chosen from foundations, blushes, eyeshadows, lipsticks, products having care properties, eyeliners, concealers, and body makeup products.

56. The cosmetic makeup product according to Claim 55, wherein the cosmetic makeup product is in the form of a lipstick.

57. The cosmetic makeup product according to Claim 1, wherein the first composition is in solid form.

58. A method of making up the skin and/or lips and/or epidermal integuments, comprising,

- applying to the skin, lips and/or epidermal integuments a first coat of a first composition comprising a physiologically acceptable medium and

- applying over all or part of the first coat, a second coat of a second composition comprising a mixture of at least one high molecular weight polymer having a weight-average molecular mass of greater than or equal to 200,000 g/mol and at least one low

molecular weight non-volatile liquid silicone compound having a weight-average molecular mass of less than 200,000 g/mol, wherein the at least one high molecular weight polymer and the at least one low molecular weight non-volatile liquid silicone are present in a proportion such that the dynamic viscosity of the mixture at 25°C, measured with a Mettler RM 180 rotational viscometer, ranges from 0.1 Pa.s to 120 Pa.s.

59. A makeup kit comprising a cosmetic makeup product comprising at least two compositions wherein,

- a first composition comprises a physiologically acceptable medium and
- a second composition comprises a mixture of at least one high molecular weight polymer having a weight-average molecular mass of greater than or equal to 200,000 g/mol and at least one low molecular weight non-volatile liquid silicone compound having a weight-average molecular mass of less than 200,000 g/mol, wherein the at least one high molecular weight polymer and the at least one low molecular weight non-volatile liquid silicone compound are present in a proportion such that the dynamic viscosity of the mixture at 25°C, measured with a Mettler RM 180 rotational viscometer, ranges from 0.1 Pa.s to 120 Pa.s

60. The makeup kit according to Claim 59, wherein the first and second compositions are packaged in two discrete compartments of a single container.

61. The makeup kit according to Claim 60, wherein the first and second compositions are packaged in two separate containers.

62. A method for providing skin and/or lips and/or epidermal derivatives with a makeup which is comfortable, glossy, does not transfer and/or does not migrate and/or has good staying power comprising including in a cosmetic makeup product comprising a first composition comprising a physiologically acceptable medium, a second composition

comprising a mixture of at least one high molecular weight polymer having a weight-average molecular mass of greater than or equal to 200,000 g/mol and at least one low molecular weight non-volatile liquid silicone compound having a weight-average molecular mass of less than 200,000 g/mol, wherein the at least one high molecular weight polymer and the at least one low molecular weight non-volatile liquid silicone compound are present in a proportion such that the dynamic viscosity of the mixture at 25°C, measured with a Mettler RM 180 rotational viscometer, ranges from 0.1 Pa.s to 120 Pa.s
